My Contribution in today's work:

AI Symptom Checker

The AI Symptom Checker is an intelligent module in the MedHUB system that assists doctors in analyzing a patient's symptoms. It uses AI to evaluate the selected symptoms and provides possible health conditions, recommended diagnostic tests, urgency level, and medication schedule to support clinical decision-making.

Search Symptoms

Helps the doctor search for a symptom quickly.

Symptom Buttons

The doctor selects the patient's symptoms.

Selected Symptoms

Shows the selected symptoms with duration and severity.

Analyze the Symptoms

Starts the AI analysis.

AI Analysis Results

Shows the results generated by the AI.

Possible Conditions

Displays the diseases that may match the symptoms.

Recommended Tests

Suggests medical tests to confirm the disease.

Urgency Level

Shows how serious the patient's condition is.

Medication Schedule

Displays the medicines and the time they should be taken.

THANK YOU
